I figured that but didn't want you to feel left out. Thanks for the quick reply.

Kelly no one in std comes to mind. Our expertise relates to green infrastructure design and not so much pump and treat design.

Hello All,

We just got a request to develop a list of individuals who could help support in the development of a Long Term monitoring plan for the Gold King Mine Spill.

They are looking for expertise in monitoring of surface water, groundwater, drinking water and sediments, and mining.

Please send me names and area of expertise by 2: 30 EST today.

The expectation is that this will be developed over the next month or two and will not require full time support.

Dave, I know you have already been asked to pull together this information for GWERD so please send that as well.

Alice, Barb Butler's name has come up for her mining expertise. Kirk Scheckel also came up for metal contamination in sediments.

Thanks,

Kelly
